

Good researchers listen to their plants, but ...

*can your plants call you
whenever they need you?*

**Now, with Research Saver,
they can.**

Has a failure of equipment or services ever damaged your experiments? Unfortunately, most scientists have had this experience. Research Saver™ gives you an added measure of protection for your valuable research!

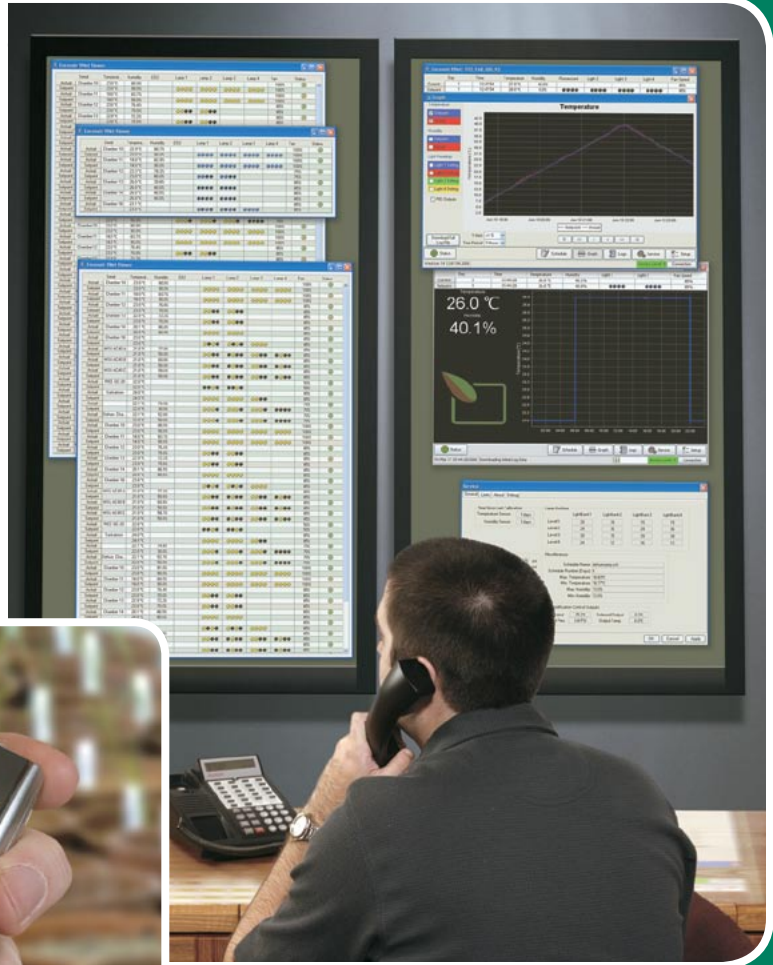

A problem with cooling water? Electrical supply? Equipment malfunction? In many cases Research Saver can diagnose the problem as well as just reporting it, so the response can be fast and effective to save your research. (It can call or e-mail you too, if you wish!)

**Stay in touch with your
research 24/7!**

Research Saver is a proprietary monitoring system unique to the industry.

- A network of sensors monitors critical parameters of your experiment and building utility services.
- Avenues of communication include email, text messaging and building alarm systems to ensure a prompt response.
- View both multi-chamber installations and individual chambers with the click of a mouse.
- Remote Access is simple over local area network (LAN) and internet.

Research Saver™ operates 24/7
...so your plants can call you if they have a problem.

Modern Technology for 21st century research, from BioChambers

BioChambers, formerly operating as Enconair, has been providing tailor-made, premium growth chambers and rooms to bio scientists around the world for over 30 years. At BioChambers, we're engineered to lead.
